

Adding a Device to the TP-Link to SmartThings Installation

This document provides instructions on adding TP Link Devices to the SmartThings installation. This document assumes:

- The device handlers and service manager have already been installed into SmartThings in accordance with “**1 - Installing DH and SmartApp into SmartThings.pdf**”.
- The Service Manager has been installed in accordance with “**2 - Running the Service Manager for the First Time.pdf**”.

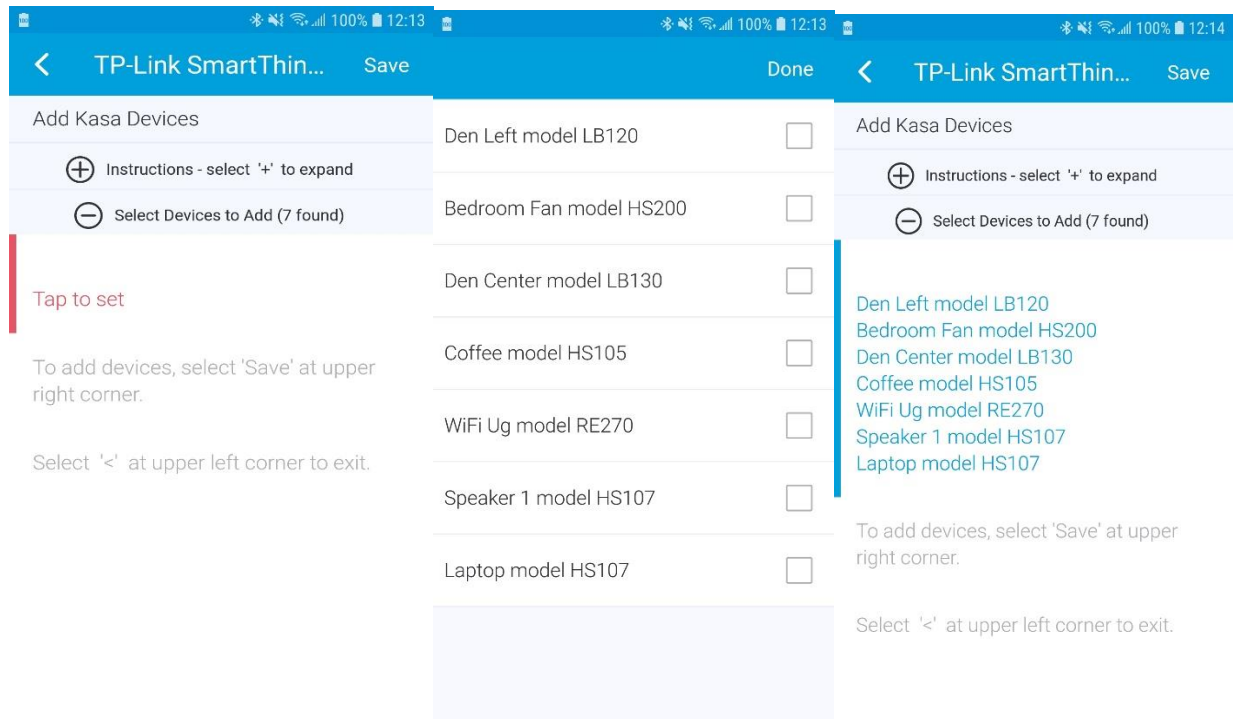

Installation Instructions

- Start the Service Manager using the phone application.
- Expand Add Devices and select in the open field label “Go to Install Devices”.

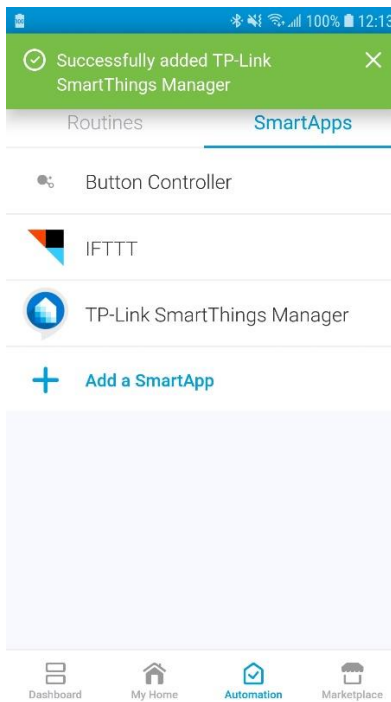

- Select the open field “Tap to set”

Adding a Device to the TP-Link to SmartThings Installation

- Select the devices to add then select “Done” at the upper right of the page.
- Finally Select the text at the upper right of the page. NOTE: “select ‘Save’” has been genericized in app to “select the text”.

The application will install the devices and exit.
